

# **IBM NALAIYATHIRAN**

## **ASSIGNMENT-2**

Build a python code, Assume you get temperature and humidity values (generated with random functions to a variable) and write a condition to continuously detect alarm in case of high temperature

### **CODE:**

```
'''
```

```
Let us consider normal temperature=30 Celsius and normal humidity=40%
```

```
'''
```

```
import random
```

```
Temperature=random.randint(1,100)
```

```
Humidity=random.randint(1,100)
```

```
print(Temperature)
```

```
print(Humidity)
```

```
if((Temperature>30)&(Humidity>40)):
```

```
    print("Temperature and Humidity are HIGH!!! ")
```

```
    print("**ALARM ON**")
```

```
else:
```

```
    print("Temperature and Humidity are NORMAL!!! ")
```

```
    print("**ALARM OFF**")
```

# OUTPUT:

Programiz Python Online Compiler

Interactive Python Course

main.py

Run

Shell

Clear

```
1 '''
2 Let us consider normal temperature=30 Celsius and normal humidity=40%
3 '''
4 import random
5 Temperature=random.randint(1,100)
6 Humidity=random.randint(1,100)
7 print(Temperature)
8 print(Humidity)
9- if((Temperature>30)&(Humidity>40)):
10     print("Temperature and Humidity are HIGH!!! ")
11     print("***ALARM ON**")
12- else:
13     print("Temperature and Humidity are NORMAL!!! ")
14     print("***ALARM OFF**")
